MANY ADVANTAGES OF A STEEL DOOR FRAME

VERSATILITY

Thanks to their durability and attractive look, steel door frames are the perfect choice for the most demanding areas. Their versatility make them a good choice for both new and older buildings that require thoughtful renovation and give them a unique style and design. Possibility of customisation and a lot of contract options, including any RAL or NCS colour, opens up many options.

INVISIBLE JOINTS

Steel door frames have welded and ground joints. Next they are painted with our Premium polyester paint. Thanks to this process, joint lines are invisible and very durable at the same time.

HIGH DURABILITY

High-precision manufacturing and first-rate materials guarantee long-term quality. Their high resistance to mechanical damages and corrosion make them great, long-lasting products. Steel door frame is a good choice, especially for rooms with increased humidity, e.g. kitchens or bathrooms.

HUMIDITY RESISTANCE

Our steel door frames are made out of galvanized steel sheet and additionally secured with passivation layer. Then, a layer of polyester powder paint is applied on the surface. This all together results in increasing corrosion resistance for many years and in protecting frames against water, e.g. during floor cleaning.

TECHNICAL INFORMATION

DOOR LEAF CONSTRUCTION

The door leaf consists of: a wide, painted panel and a narrow stile covered with natural or synthetic veneer. For a glazed model we use 8 mm thick, frosted, tempered glass which is a construction element of the door leaf. Painted white part has a satin smooth surface which is achieved thanks to UV painting technology. Natural veneer is protected with ecological water varnishes, hardened under UV lamp (semi-matt effect).

ACCESSORIES INCLUDED IN THE DOOR LEAF PRICE

- Two 3D hinges
- Lock with silver or glossy gold faceplate: key lock, WC lock, or cylinder lock
- Preparation for shortening, model 4.0 maximum 60 mm
- 8 mm, frosted, tempered glass

***NOTE!** Investment norm (clear opening width 800,900 mm) is available as a standard without an extra charge - add 8 mm to S₀ dimension.
Please, remember to order suitable size of door leaves which are dedicated for the set.

**If the back of the hinge does not fit in a wall opening, a little wall chasing has to be made.

* Project (BIS and Premium) requires enlarging the wall opening S₀ by 30 mm and H₀ by 15 mm (dimension tolerance +10 mm/ +5 mm)
Other Project door frame sizes, see drawing on page 190.

** Steel threshold decreases given dimension by 16 mm.

*** Door leaf thickness is measured on vertical edges (door leaf without infill, opened from closing side).

- Porta VECTOR
- Porta DESIRE
- Nature CLASSIC
- Nature LINE
- Nature VECTOR

NOTES:

- Dimensions tolerance according to PN: to 1 m ±=1mm, above 1 m ±=2mm.
- Side door panels for rebated door sets are available in natural veneer in size '40'; S_s=444, H_s=2030.
- Door frames are designed to be installed on finished floor level. For steel door frames there is a possibility to order them in lengthen option + 30 mm (to be mounted under floor level). In this case sizes H_s and H_z are enlarged by 30 mm (level -30).
- Given dimension refers to internal door leaves, both rebated and sliding
- Porta SYSTEM integrated with an upper transom. Dimensions H_o, H_{gr}, H_z +302 mm.
- Project (BIS and Premium) requires enlarging the wall opening S_o by 30 mm and H_o by 15 mm (dimension tolerance +10 mm / +5 mm)

* Project (BIS and Premium) requires enlarging the wall opening S₀ by S₀ by 30 mm and H₀ o 15 mm (dimension tolerance ±10 mm / ±5 mm).

Other Project door frame sizes, see drawing on page 192.

** Steel threshold decreases given dimension by 16 mm.

Durability levels of Porta finishes

■ CHECK THE NUMBER OF STARS NEXT TO EVERY FINISH

You can find six groups in below classification of Porta finishes. Finishes were grouped considering quality, durability and resistance to external conditions. We hope that this classification will help you to make the best possible choice. You can find the information about durability level next to each product.

Especially for you, basing on European standards, we have developed a classification of finishes (durability levels). We took into account various external factors which directly affects the durability of the door surface. Durability levels depends on the resistance to the following factors which make an impact on doors and finishes in everyday use.

ABRASION

Unavoidable during any door usage. Every day doors are exposed to lots of abrasions, caused by people walking through and opening doors inappropriately because of their hands occupied with documents or belongings

DAYLIGHT

The factor which changes the colour shade in long term use. We have checked all types of veneer for you. Especially their reaction to daylight during long year use. We are proud to emphasize that the finishes we chose, achieve very good results throughout the entire time of use.

DETERGENTS

Housekeeping, both at home and in a workplace involves the use of detergents which make an impact on surface durability.

HUMIDITY

Direct exposure to highly humid air influences veneer. Its resistance to this factor guarantees constancy of shape and solid surface throughout the whole time of use.

natural veneer/burl

Natural veneer - Oak ★★★★★☆☆

Natural veneer - Ash ★★★★★☆☆

Natural veneer - Walnut ★★★★★☆☆

Natural veneer 'Select' - is a specially prepared and selected natural veneer characterized by high repeatability of the wood grain and colour. Products finished with this type of veneer meet the high quality standards.

Natural veneers: Oak Ash, Walnut and Satin Oak - are characterized by a variety of colour, graining, etc. Their properties are the result of: natural environment of trees, climate, habitat conditions. These morphological properties of wood, which are characteristic for a natural material, distinguish it from synthetic finishes and aren't defective in any way.

Natural veneer - Oak Satin ★★★★★☆☆

Finishes key:
N- 'striped' wood grain
K- 'flower' wood grain

Certain veneer pattern is received thanks to proper wood selection, appropriate veneer leaf processing and its folding technique.
Striped - veneer with a consistent wood graining.
Flower (flader) - veneer with a natural, clear and patterned wood grain.

Due to the characteristic of natural veneers, differences in colour and graining, might appear on a door leaf. These differences cannot be grounds for complaints.
